

**IN THE CASE OF HEAT PUMPS, THE FALL VISIT INSPECTION INCLUDES SEVERAL OF THE SPRING VISIT INSPECTION PROCEDURES AND SEVERAL ADDITIONAL ONES. SEMI-ANNUAL INSPECTIONS OF HEATPUMPS ARE JUST AS IMPORTANT.  
THE BOTTOM LINE**

- Dollars saved: PMA's will more than pay for themselves due to contractor discounts, a higher efficiency, and utility payment savings. Typically, PMA customers receive discounts on parts and services performed year round.
- Preferred Service: If you would experience a system failure during those sweltering hot or frigidly cold months, PMA customers normally experience preferred service.
- A familiar face: In many cases you will be assigned the same service technician. In this way you recognize and trust your service person and in addition your service person is more familiar with you and your equipment.
- Your own peace of mind: Because PMA's result in less system failures and extended life for your HVAC system, you can be at ease knowing that you and your system is well taken care of.
