

## **THEY MAY NOT BE SEEN BUT PROBLEMS WILL MAKE THEM HEARD**

Most often HVAC systems are installed in out-of-the-way and out-of-sight places (such as basements, roof tops, closets or maintenance rooms). Because of this your system may not readily enter your mind and taken for granted – That is until there is a problem or they fail altogether. As a result, you could experience overpayment of utility bills, a decrease in efficiency and/or discomfort, early replacement of your system and possibly higher repair costs.

Even if your HVAC system is out of sight that doesn't mean that it should be neglected. Semi-annual inspections are as important as maintenance on your automobile (like changing the oil every 3000 miles).
