

## **HERE'S WHAT YOUR SERVICE TECHNICIAN WILL DO DURING YOUR PMA VISIT:**

- Check your system's functions, the safety controls, and if needed, adjust the operating sequence.
- Perform an inspection on the electrical components and, as required, tighten, repair or replace.
- Change the dirty air filters and ensure proper airflow.
- Where appropriate, perform an inspection on pumps, lubricate, and check flow rates.
- As required, clean and lubricate motors.
- Examine, adjust and align the systems belts.
- As required, inspect, clean and balance blowers.
